

## ABSTRACT OF THE DISCLOSURE

The "Edible Molded Apparatus with Novel Effect" is designed to provide a decorative, surprising and flavor enhancing experience when placed on an edible preparation, such as on a cake. This apparatus consists of a formed edible body which contains an inner ducting(s) channeling a flowable edible substance out onto an edible preparation. This edible substance provides a novel, surprising effect when propelled through the apparatus and may also enhance flavor of the edible preparation. The apparatus comprises a molded edible body, a ducting which passes through a hole in the edible preparation and it's supporting platform, and connects to a housing for a flowable substance and a propulsion mechanism.
